

Farming Smarter: Plot Shots — Soil moisture maps during growing season

Sept. 15, 2019

Video: <https://www.youtube.com/watch?v=bm6y02iMoPA>

Lewis Baarda, Farming Smarter Field Scale Research, talks about in-season soil moisture mapping. The project uses the EM-38 to measure soil moisture during crop growth.

Technicians mapped two fields every two weeks during the season.

The goal is to understand the movement of moisture in soil under a crop.
